

Sebaceous Adenitis (SA) Therapy Plan

Jv SAN BERNARD^{USA}

This therapy is designed for pets that suffer from Sebaceous Adenitis (SA). This is just a basic therapy plan and may need to be changed or added to depending on your pet's individual needs. Sebaceous Adenitis is not curable and varying levels of therapy and management will be required for the life of the pet.

PHASE 1: To deeply hydrate the skin make sure that the pet is leaving each therapy with an almost greasy coat. Treat once per week until skin has recovered and is growing coat.

DETOX

Mix with frother until foamy a mixture of
Orange PEK Mask
K101
Apply all over dog, wrap in plastic for 20 mins to soak then rinse thoroughly

CLEANSE

Mix with frother until foamy a mixture of
Mineral H Shampoo
Ginkgo Oil
Ozonated Olive Oil
Apply all over dog, soak 8 mins, then rinse thoroughly

HYDRATE

Mix with frother until foamy a mixture of
Orange PEK Mask
K101
Ginkgo Oil/ Olive Oil
Apply all over dog, wrap in plastic for 10 mins to soak then rinse thoroughly

PHASE 2: To maintain skin health and hydration while also strengthening and growing coat. Should be done at least every 4 weeks for lifelong maintenance.

CLEANSE

Mix with frother until foamy a mixture of
Mineral H Shampoo
Apply all over dog and soak for 5 mins then rinse thoroughly

HYDRATE

Mix with frother until foamy a mixture of
pH Balance Conditioner
Orange PEK Mask
Apply all over dog and soak for 5 mins or longer then rinse thoroughly

DAILY TREATMENT: This is the line of defense against disease. Must be done daily to keep the oils in the skin. This is a lifelong, daily requirement to maintain skin health.
